Mills Assessed Delivered (MAD) / Dealer-Tank Wagon (DTW) Prices

Also available digitally on app.millsprice.com • Questions, comments? Contact us at support@millsprice.com

NOTE: Mills Assessed Delivered (MAD) Prices extend the 10:00am ET “Contract Benchmark” MARC rack price of each zip code’s origin rack terminal city to a **delivered, tax-in** equivalent at the zip centroid: MARC plus the Mills Fuel Freight Index for the haul distance and truck class, plus the tolls crossed on the routed road, plus federal and state motor-fuel excise taxes, in **\$/gal**. MAD is a **delivered cost index** for **unbranded** fuel on **gross** volume and **gross** terms. It is not an observed dealer-tank-wagon (DTW) market price, and it excludes distributor margin, branded premiums, and local taxes. MAD prices can be referenced in DTW supply contracts the same way MARC is referenced at the rack. See the [Mills Methodology & Specifications Guide](#).

National reference for the truck freight adder between a rack and a delivery point: the Mills truck freight rate model’s base rate (driver and equipment, round trip with an empty return, load and unload dwell, and an hours-of-service premium beyond a 9 hr round trip, which is why full-transport rates step up past 175 mi) plus the fuel surcharge at the national median primary-diesel MARC (4.9363 \$/gal this edition, 126 cities), each band priced at its midpoint at the class’s reference speed. The fuel term carries no motor-fuel tax, which understates a carrier’s fuel cost by roughly \$0.0026/gal on a gasoline full transport and \$0.0168/gal on a small tank wagon at the widest band, and about twice that where a state diesel tax applies. Because that term is a diesel level, the whole index moves with diesel. Excludes taxes, accessorials, and supplier adders. Each MAD row below uses the band its road distance falls in, plus the tolls counted on the routed road from its origin terminal at \$42.50 per truck per crossing.

Min, median, and max are taken across every zip and truck class printed for the city in this edition (the median is the closest printed price). Within one destination state the lowest price is the nearest zip on a full transport and the highest the farthest on a small tank wagon; where a city serves more than one state, the state taxes can reorder them.

Personalize this report

This edition covers the four Mills scorecard markets. *Personalize* it to the racks you buy from, and every edition arrives with the 25 most populous zip's in each state those racks serve, priced for all four truck classes, at app.millsprice.com/profile.

Free for verified refined-products market participants during the Initial Release Period.

Reading a MAD price code

07002 GR87 : QTF

5-DIGIT ZIP CODE MILLS PRODUCT SPEC TRUCK CLASS

07002GR87:QTF is RFG Unl 87 E10 delivered to zip code 07002 (Hudson County, NJ) on a Full Transport load of 8,500 gal, federal and New Jersey taxes included. The zip and spec name the price. The suffix names the truck the freight is billed on.

QTF	Full Transport	8,500 gal gasoline	7,500 gal diesel
QTP	Partial Transport	6,000 gal gasoline	6,000 gal diesel
QTW	Reg. Tank Wagon	3,000 gal gasoline	3,000 gal diesel
QTB	Small Tank Wagon	1,000 gal gasoline	1,000 gal diesel

The spec is always the origin rack city's primary gasoline or primary diesel. A zip's origin is the lowest drive-time rack among the three nearest MARC cities publishing the product. Zip's are listed under their own state and their origin city, so a New Jersey rack can head a New York section.

The Mills Fuel Freight Index

A general price reference for truck freight adds: the national base freight rate plus the national fuel surcharge, by truck class, by product, by road-mileage band, from the Mills truck freight rate model. It is what every MAD row on the following pages adds to MARC, beside the tolls counted on its own routed road at \$42.50 per truck per crossing. It excludes taxes and supplier adders, so it is a floor for a quoted freight rate rather than a quote.

MAD = MARC + Freight Index + tolls + federal tax + state tax. Ex-Tax is everything before the two taxes. Change is measured against the prior published edition. It is the rack move plus the index move, and the index moves only with the national diesel median.

Personalize in three steps

1 Follow your markets

Under **Reports**, add the rack cities and grades you buy. Any gasoline grade you follow turns on that city's delivered gasoline; any diesel grade turns on its delivered diesel. Prices quote the city's primary grade, whichever grade you follow.

2 Subscribe to the Delivered report

Under **Reports**, turn on the Delivered Price Report. Every edition prices all four truck classes, so there is nothing else to configure.

3 Receive your edition

From the next edition on, your report lists the 25 most populous zip's in each state your racks serve, where that rack is the zip's nearest origin by drive time, organized by PADD, state, and origin rack, with each zip's own state tax applied.

PROFILE > REPORTS

Rack Price Report **Subscribed** MARC, twice daily

Delivered Price Report **Subscribed** MAD, twice daily

PROFILE > REPORTS > DELIVERED PRICE REPORT

Houston, TX **TXHGR87** **TXHGR93** **TXHDL00** **MAD: gasoline + diesel**

Tulsa, OK **OKTGC87** **MAD: gasoline**

Newark, NJ **NJNDC00** **MAD: diesel**

The Rack Price Report keeps its own list of markets; **Copy MARC markets** fills this list from it. Clear your delivered markets to return to the four scorecard markets.

For the complete [Mills Methodology & Specifications Guide](#), including the truck freight rate model, MAD price-code construction, and the covered-zip list, visit millsprice.com/methodology.

What a MAD Price is

A Mills Assessed Delivered (MAD) Price is the published MARC rack price of a zip code's origin rack terminal city plus the Mills Fuel Freight Index for the road distance from that rack to the zip centroid and the truck class, plus the tolls crossed on the routed road, plus federal and state motor-fuel excise taxes. It is a delivered cost index on a wholesale, unbranded, gross-volume, gross-terms basis, quoted in \$/gal to four decimals. It is not a survey of dealer-tank-wagon postings and contains no distributor margin.

Coverage and origin rack

A zip is covered when the rack terminal nearest its centroid, by straight-line distance, belongs to a MARC-published terminal city. Candidate origins are one terminal in each of the three nearest MARC cities publishing gasoline and the three nearest publishing diesel; each is routed by road once and stored. The origin for a product is the stored candidate with the lowest drive time whose city publishes that product on the edition date. Zips are listed under their own state, which sets the tax, and their origin rack city, which sets the MARC. A personalized edition shows the 25 most populous covered zips of each state among the cities you follow, per the latest Census count.

Mills Fuel Freight Index

The Mills truck freight rate model prices a round trip with an empty return: round-trip hours (drive time both ways at the class's reference speed plus load and unload dwell) at the class's operating rate, an hours-of-service premium beyond a nine-hour duty day, and the diesel burned over round-trip miles at the class's fuel economy, divided by the class's full legal load for the product. Each mileage band is priced at its midpoint; a MAD row uses the band its routed one-way road distance falls in. Accessorials (split drops, pump-offs, demurrage) and supplier adders are excluded.

The fuel term is priced at the national median of published primary-diesel MARC for the edition, 4.9363 \$/gal across 126 cities this edition. That is a rack level carrying no motor-fuel tax, so the index understates a carrier's real fuel cost. At the widest band, priced at 275 miles, federal diesel excise alone would add about \$0.0026/gal on a gasoline full transport and about \$0.0168/gal on a small tank wagon; a typical state diesel tax roughly doubles each of those again, to about \$0.0059/gal and \$0.0374/gal. Shorter bands scale down with round-trip miles. Because the fuel term is a diesel level, the whole index, gasoline cells included, moves when the national diesel median moves, and that move is part of a published MAD change.

Tolls

Priced beside the index rather than inside it, because a toll is a property of the road a lane takes rather than of its distance. Toll plazas and gantries on the routed road from the origin terminal to the zip centroid are counted off the stored route geometry against a national crossing dataset, and each one is charged at \$42.50 per truck, spread over the class's full legal load for the product. A crossing therefore costs a full transport about half a cent a gallon and a small tank wagon about four and a quarter. The count and the per-truck charge print on each zip line, so the freight column adds back from the index table and those dollars. Both editions of a day count the same crossings on the same route, so tolls never move the change column.

Taxes

Federal excise including the LUST fee (gasoline \$0.184/gal, diesel \$0.244/gal) plus the state motor-fuel tax of the zip's state as of the report date, printed above each zip. County, municipal, and sales taxes are excluded.

Editions and changes

MAD publishes with each MARC edition: the morning Contract Benchmark at 10:00 am ET and the evening Closing Benchmark at 4:59 pm ET. The change column compares the morning edition with the prior evening and the evening edition with the same-day morning. It is the rack move plus the index move from the national diesel median. A zip whose origin rack changed between the two editions prints no change, since the two prices are struck at different racks.

Please send any feedback or questions to support@millsprice.com, or reach us on ICE Chat at Mills Price Desk.

MAD Prices are modeled delivered-cost assessments at a point in time and should not be construed as guaranteed transaction prices. Actual delivered prices differ by carrier contract, drop size, accessorials charges, credit terms, brand, and local taxes, and by the toll schedule a carrier actually pays. MARC and MAD prices, codes, and methodology remain the proprietary property of Mills Price, LLC. For the complete Methodology & Specifications Guide, see the link above or contact Mills Price, LLC.
